Finding an idea

Cake

Make tylko dla C#

Karol Sejka @sejka   Nov 04 2016 15:18

hi, i'm wondering if i can use httpclient directly from cake file instead of HTTP Operations since i'd like to use timeout options (i'm thinking about making pr for that matter). however im getting `The type or namespace name 'HttpClient' could not be found` despite having `#addin "nuget:? package=System.Net.Http"` at the top.

Alistair Chapman @agc93   Nov 04 2016 15:19

@ksejka Do you have the `using` statement for the `HttpClient` type?

Karol Sejka @sejka   Nov 04 2016 15:19

currently not

Alistair Chapman @agc93   Nov 04 2016 15:19

@ksejka You may need to add that to use the type

@ksejka Only certain namespaces are automatically brought in and other Cake addins explicitly specify the namespaces they import

Karol Sejka @sejka   Nov 04 2016 15:28

ah, ok thanks!

one more question: do i have to use .Result on httpclient or is there a way to use async in cakefile?

Mattias Karlsson @devlead   Nov 04 2016 15:31

@ksejka there's a PR for async in tasks, but not merged yet.

So to answer your question yes you would have to use Result.

Karol Sejka @sejka   Nov 04 2016 15:31 ✓

great! thanks a lot!

Mattias Karlsson @devlead   Nov 04 2016 15:32

That said there's a few HTTP options avail out of the box with cake too
http://cakebuild.net/dsl/http-operations

Karol Sejka @sejka   Nov 04 2016 15:34

sure, i've seen them but i need to use timeout time which currently isn't available through DownloadFileSettings

im thinking about adding this

Mattias Karlsson @devlead   Nov 04 2016 15:34
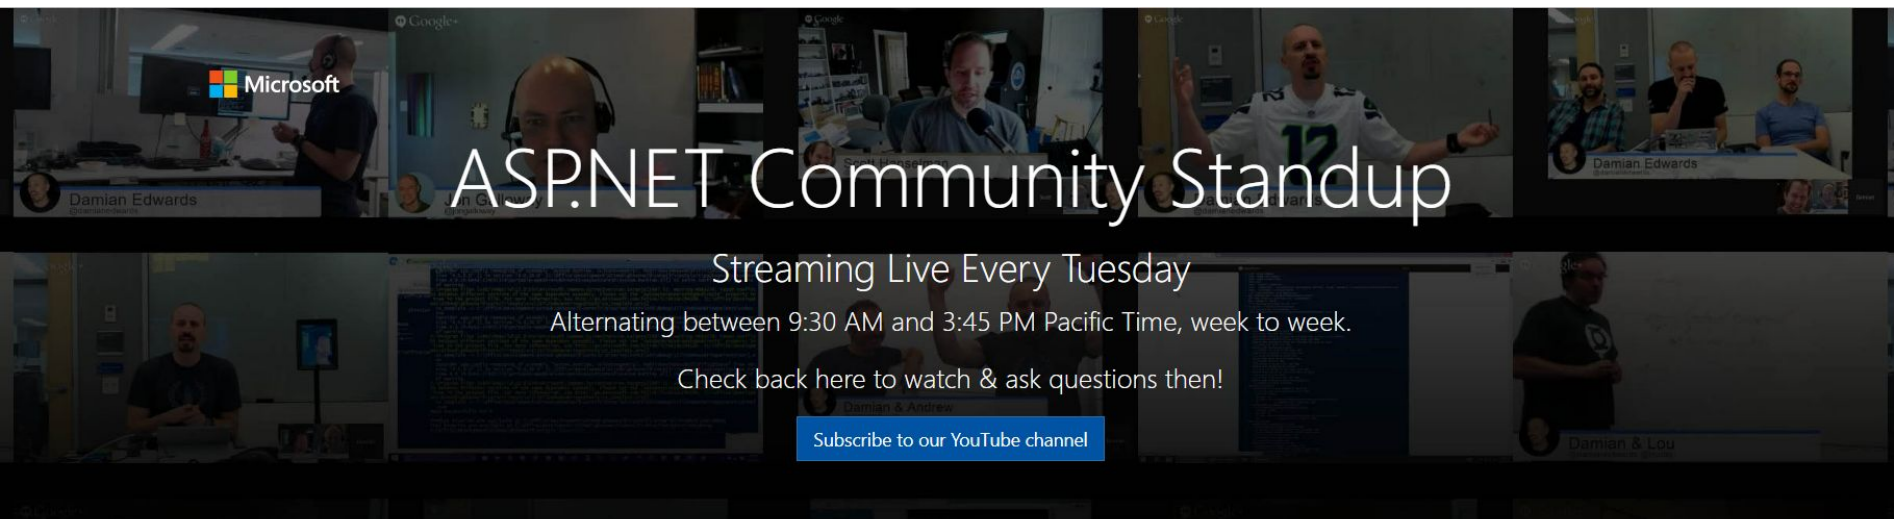

That would be an great addition yes 👍
